

HAUSKU Webshop V1

Mandatory Correction and Acceptance Report

Purpose: Consolidated feedback for coordination with the webshop developer

Status: V1 development review – corrections required before production launch

1. Overall assessment

The first version of the HAUSKU webshop provides a good technical and structural foundation. The main navigation, catalogue, product pages, cart/account architecture, bilingual concept, payment presentation and general ecommerce structure are already visible.

The webshop is, however, not production-ready in its current state.

The next development iteration must focus on completing and correcting the existing implementation rather than adding further features.

The following areas require mandatory correction before the webshop is opened for real customer orders:

- legal pages and company information
- GPSR/product-safety information
- inaccurate or unsupported marketing claims
- review presentation and authenticity
- checkout/payment verification
- shipping logic
- product variants and product information
- account/invoice/email functionality
- SEO implementation
- visual/color-system refinement
- privacy/cookie implementation

technical/security acceptance testing.

All items marked P0 below are mandatory launch blockers.

2. Brand manufacturer status and country-of-origin wording

Developer action – mandatory

NI Intellect UG should be identified as the manufacturer for GPSR purposes for HAUSKU private-label products where NI Intellect UG has the products designed/manufactured for it and markets them under its own brand.

This is correct even though physical production is performed by a contract manufacturer/supplier in China.

The product pages should therefore use the appropriate manufacturer information for:

NI Intellect UG

- registered company name
- postal address
- electronic contact address
- relevant product identification

product-specific safety information.

Waqar should provide the developer with the final official NI Intellect UG address, contact details and other required company data.

NI Intellect UG (haftungsbeschränkt)

Roggenring 26,

23619, Hamberge

Schleswig-Holstein

Deutschland

saleshub@niintellect.de

Important distinction

The designation "Made in Germany" must be removed.

The products are manufactured in China. NI Intellect UG's legal status as manufacturer under GPSR does not change their geographical manufacturing origin.

The appropriate brand wording is:

"Designed in Germany"

Do not use:

- Made in Germany
- Manufactured in Germany
- German-made

or any equivalent wording implying German physical production.

Priority: P0

3. Legal pages – mandatory completion

The legal pages currently contain unfinished or placeholder information. This must be completely corrected before launch.

The approved Händlerbund texts for the above will be provided separately as attached documents. Implement them exactly as supplied, without rewriting or improvising the legal wording.

Developer action

Implement the supplied Händlerbund texts without rewriting or improvising the legal wording.

Remove every placeholder and test value from the live site.

This includes, among others:

- dummy street/address information
- dummy HRB number
- dummy VAT ID
- "Max Mustermann"
- "[Wird vom Klient ergänzt]"
- "[Telefonnummer]"

other developer placeholders.

The footer wording:

"§5 TMG · NICHT EU"

must also be removed/corrected.

The current "Versand & Zahlung" link must lead to a dedicated and correct Versand & Zahlung page and must not point to the AGB page.

Acceptance criterion

No placeholder, sample or fictitious legal/business data may remain anywhere on the production website.

Priority: P0

4. GPSR product information

The current GPSR implementation is insufficient.

Displaying only:

Hersteller: HAUSKU

is not adequate.

Developer action

Create structured GPSR fields in the product-management system.

Each applicable product page must support:

- manufacturer name
- registered/trading name
- postal address
- email/electronic contact
- product image

- product type
- SKU/model/product identifier
- relevant safety warnings

user/safety instructions where required.

For the HAUSKU products, NI Intellect UG can be identified as the manufacturer because it has the products designed/manufactured and markets them under its own brand. The GPSR expressly treats such an entity as a manufacturer.

Do not simply place all GPSR information into one free-text product-description field. These should be structured product fields editable from the administration interface.

Roggenring 26, 23619 Hamberge, Schleswig-Holstein, Deutschland

official support/contact email; saleshub@niintellect.de

SKU/model identifiers;

Lunchbox:

- HSK-2401-850 ml
- HSK-2401-1200 ml
- HSK-2401-1400 ml

Laptoptray:

- HSK-LPTG-2501
- HSK-LPTB-2501

Couchbar Snackbox:

- HSK-CBSB-2601

product-specific warnings; File will be shared
packaging/manual information where relevant.

Priority: P0

5. Customer reviews and the "4.8 / 47 Reviews" statement

The source and authenticity of the reviews currently shown on the webshop have not been documented.

They appear likely to have been taken from existing Amazon HAUSKU lunch-box reviews.

This cannot simply be assumed to be acceptable.

Developer action

Please confirm in writing:

- where the displayed reviews were sourced
- whether they were copied/imported from Amazon
- which HAUSKU product each review belongs to
- whether "4.8 from 47 reviews" represents an actual calculated rating
- whether these reviews are genuine verified customer reviews or development/demo data

how the review source and verification status are represented technically.

Do not present test reviews, invented testimonials or placeholder ratings as genuine customer reviews.

If these are Amazon reviews, do not continue using them automatically until the use and presentation have been confirmed as permissible and the review source is correctly represented.

Do not mix lunch-box ratings with unrelated products such as Lapdesks or Couch Bars.

Acceptance criterion

Every displayed review and aggregate rating must have a documented and traceable source.

Priority: P0

6. 60-day test period / return promise

The webshop currently advertises a 60-day test/return period.

This was not part of the agreed commercial policy.

HAUSKU currently normally follows approximately the 30-day return experience used on Amazon.

Developer question

Please explain why 60 days was selected and whether this was intentionally implemented as a new HAUSKU commercial policy or inserted as development/demo content.

Until NI Intellect UG specifically approves a 60-day voluntary return guarantee, this claim should not be presented as a firm HAUSKU benefit.

Recommendation

For launch, use a clearly defined 30-day voluntary return policy if NI Intellect UG wishes to match its existing Amazon customer proposition.

The statutory Widerrufsrecht must remain clearly separate from any voluntary extended return policy.

If a voluntary return policy is used, it must define:

- duration
- start date
- eligible products
- allowed product condition
- return-shipping costs
- packaging requirements
- refund procedure

relationship to statutory consumer rights.

Priority: P1, but wording must be corrected before launch.

7. "2 Jahre Garantie"

The webshop currently advertises a 2-year guarantee, but NI Intellect UG has not agreed or established a separate HAUSKU voluntary guarantee program.

Developer action

Remove the current "2 Jahre Garantie" marketing claim.

Do not use the word "Garantie" simply as another term for statutory Gewährleistung.

Future option

A dedicated HAUSKU commercial guarantee could have marketing value later, particularly for durable products such as:

- stainless-steel lunch boxes
- Lapdesks

Couch Bar products.

If NI Intellect UG decides to offer one later, it should be created as a proper voluntary manufacturer-guarantee program with clear written guarantee conditions.

This is not required for V1.

Priority: P0 – remove current claim.

8. "100% auslaufsicher"

The lunch boxes have been used internally and are known to be leak-resistant/leakproof in normal intended use. However, no formal test evidence exists supporting an absolute 100% performance statement.

Developer action

Replace:

"100% auslaufsicher"

with:

"Auslaufsicher"

where factually appropriate.

Do not use "100%" unless objective evidence exists supporting the absolute claim under the relevant usage conditions.

Where useful, the product description may clarify that leak resistance depends on the lid and seal being correctly fitted and closed.

Priority: P1

9. "100% recycelbar"

There is no evidence establishing that the complete products—including silicone, textile, plastic or other components—are 100% recyclable.

Developer action

Remove the claim:

"100% recycelbar"

from the webshop.

Specific material claims can be used later where factually correct, for example that certain stainless-steel components are recyclable.

Do not substitute another broad environmental percentage without supporting documentation.

Priority: P0/P1

10. "Klimaneutraler Versand"

NI Intellect UG currently has no documented climate-neutral shipping program or carbon-compensation arrangement supporting this statement.

Developer action

Remove:

"Klimaneutraler Versand"

from all pages.

It must not be replaced with another absolute environmental shipping claim unless NI Intellect UG introduces and documents an actual program supporting that claim.

A factual wording such as normal delivery information can be used instead.

Priority: P0

11. Broader sustainability wording

The webshop should continue communicating HAUSKU's sustainability positioning, but it should do so through specific factual product characteristics rather than broad absolute environmental statements.

Preferred examples include, where factually correct:

- reusable stainless-steel construction
- products designed for repeated long-term use
- replaceable silicone seals
- reduced use of disposable packaging
- durable materials

reusable accessories.

Avoid broad unsupported wording such as:

- 100% sustainable
- completely environmentally friendly
- zero-impact
- climate neutral

100% recyclable.

Priority: P1

12. Free-shipping values

The current product prices, shipping threshold and stock quantities are development/test values.

They should therefore not be treated as final business rules at this stage.

Developer action

The shipping system must nevertheless be built dynamically.

It must support:

- configurable free-shipping threshold
- configurable normal shipping cost
- country-specific shipping settings
- automatic free-shipping calculation

correct cart and checkout recalculation.

The product page must not show contradictory messages.

For example, if a product already qualifies for free shipping, it must show:

Kostenloser Versand

and not simultaneously display a €4.99 shipping charge.

Where useful, implement:

"Noch €X bis zum kostenlosen Versand."

The actual threshold and prices will be supplied by NI Intellect UG before production launch.

Priority: P1

13. Inventory values

Current webshop stock numbers are development/test values and are not yet connected to real inventory.

Developer action

Do not treat these quantities as production inventory.

Before launch, the webshop must use actual stock values supplied/maintained by NI Intellect UG.

For the initial launch, webshop orders will be fulfilled from NI Intellect UG's own stock.

The architecture should not prevent later integration with:

- Amazon FBA / Multi-Channel Fulfilment
- another warehouse

3PL fulfilment provider.

For V1, Amazon/FBA integration is not a launch requirement.

However, the inventory architecture should allow a future external inventory source/API instead of hard-wiring manual stock permanently.

On the customer-facing website, prefer:

Auf Lager

Nur noch wenige verfügbar

Nicht verfügbar

rather than exposing exact warehouse quantities unless NI Intellect UG specifically requests exact quantities.

Priority: P1

14. Product variants

Current variant presentation is incomplete.

Lunch boxes

The customer should be able to clearly navigate/select:

- 850 ml
- 1200 ml
- 1400 ml.

If these remain separate product URLs, the size selector should cross-link between them.

Do not display "Größe auswählen" if there is only one non-interactive size shown.

Lapdesk

Customers should be able to clearly select:

- Grey
- Black.

Use proper visible colour options/swatches.

Do not display "Farbe auswählen" without an actual colour selection.

Priority: P1

15. Product-detail pages

The current product pages are too limited for the final webshop.

Developer action

Create clearly structured specification/content sections.

Laptop tray / Lapdesk

Include fields for:

- dimensions
- weight
- supported laptop size
- material
- smartphone-slot dimensions
- mouse-pad dimensions
- wrist-support information
- cleaning instructions
- intended usage
- contents of package
- FAQ

safety information.

Stainless-steel lunch boxes

Include:

- dimensions
- capacity
- weight
- material specification
- lid material
- sealing material
- dishwasher suitability
- microwave warning
- oven warning where applicable
- divider information
- accessories
- cleaning/care instructions

- food-contact information
- contents of package

FAQ.

Couch Bar

Include:

- external dimensions
- weight
- materials
- bowl dimensions/volume
- cup/bottle-holder dimensions
- included components
- care/cleaning instructions

usage information.

Priority: P1

16. Checkout – mandatory acceptance test

The checkout must be completely tested before launch.

Developer action

Demonstrate the complete production/staging flow for:

Checkout

- guest checkout
- registered-customer checkout
- billing address
- shipping address
- validation/error handling
- VAT
- shipping
- discounts

final total.

Payment

Test every method that will be shown publicly.

Please confirm exactly which of the following have already been implemented and tested:

- Stripe/card payments
- PayPal
- Klarna
- Apple Pay

Google Pay.

Do not display payment logos for methods that are not actually active.

Failure cases

Test:

- successful payment
- rejected payment
- cancelled payment
- browser refresh
- browser back

repeated callback/webhook.

Order integrity

A successful payment must produce:

one payment → one order → one stock deduction

Duplicate orders or duplicate stock deductions must not occur.

Evidence requested

Please provide Waqar with either:

staging access and a complete test walkthrough; or

screen recordings showing successful test transactions for each implemented payment method.

Priority: P0

17. Final-order page

The final checkout step must clearly display the complete purchase commitment before submission.

This includes:

- product(s)
- quantity
- price
- VAT
- shipping
- total
- delivery information

relevant contractual information.

The order button must clearly indicate that the customer is placing a payment obligation.

Do not use an ambiguous button such as merely:

- Continue
- Order

Confirm.

Use legally appropriate German checkout wording.

Priority: P0

18. Customer account

The complete account functionality must be demonstrated.

Developer action

Test and demonstrate:

- account registration
- login
- logout
- incorrect password handling
- password reset
- customer-name editing
- address management
- order history
- completed orders
- cancelled/refunded orders

account/data deletion process where applicable.

The webshop was specified to provide customer accounts, order history and saved addresses, so these must be functional rather than visual placeholders.

Priority: P1

19. Invoice system

It is currently unclear whether invoice functionality has been implemented.

Developer – please confirm

Please state:

- whether invoices are generated automatically
- whether invoice numbers are sequential
- whether VAT is correctly displayed
- whether PDF invoices are generated
- whether customers can download invoices
- whether invoices are emailed
- whether cancellation/credit notes are supported

whether invoice/order data can be exported for accounting.

If invoice functionality is not yet implemented, please state the proposed implementation before launch.

Priority: P1

20. Transactional emails

The original scope included branded order-confirmation and tracking emails.

Developer action

Demonstrate the following emails:

- account registration
- password reset
- order confirmation
- successful payment
- shipping confirmation
- cancellation
- refund

return request/confirmation.

All customer-facing emails must be available in both:

- German

English.

Priority: P1

21. German and English webshop versions

The webshop must be production-ready in both German and English from launch.

English is not a later optional phase.

Developer action

The language switch must cover all customer-facing content, including:

- navigation
- categories
- product titles
- product descriptions
- product specifications
- cart
- checkout
- validation/error messages
- account
- contact page
- delivery/payment information
- transactional emails

cookie/consent interface.

Legal content should be handled according to the actual legally approved texts and target-market requirements.
Do not leave German strings inside the English checkout or vice versa.

Priority: P1

22. Privacy, cookies and tracking

It is currently not confirmed which analytics or tracking technologies have been implemented.

Developer – required confirmation

Please provide a list of all currently installed or planned tracking/third-party technologies, including:

- Google Analytics
- Google Ads
- Google Tag Manager
- Meta Pixel
- Microsoft/Bing tracking
- Hotjar or similar tools
- newsletter tracking
- third-party chat
- embedded marketing services

other non-essential cookies/local storage.

If any non-essential tracking is used, it must not load before the required consent has been obtained.

The consent solution must support:

- accept
- reject
- granular selection where applicable

later withdrawal/change of consent.

Waqar action

When the final technology list is available, use the corresponding Händlerbund legal-text configuration so that the Datenschutzerklärung accurately reflects the actual webshop implementation.

Will do once confirm

Priority: P0

23. SEO – mandatory V1 corrections

The current SEO implementation requires completion.

Developer action

Implement:

- unique <title> for every indexable page
- unique meta descriptions
- canonical URLs
- XML sitemap
- robots.txt
- proper German/English hreflang
- product structured data
- Organization structured data
- breadcrumb structured data
- meaningful image alt text

SEO-editable fields in the admin panel.

Do not use the same generic title such as:

"hausku — Haus & Küche"

for every product page.

Example structure:

Laptopkissen Grau bis 17 Zoll | HAUSKU

rather than a generic site-wide title.

Review/rating structured data must only be included if the underlying review information is genuine and correctly sourced.

Priority: P1

24. Color system and visual direction

The current webshop uses an excessively bright/saturated green gradient in several large sections.

This should be changed.

The desired HAUSKU brand impression is:

- natural
- calm
- modern
- trustworthy
- sustainable

slightly premium.

The current neon/lime-green treatment communicates more of a technology/start-up appearance and does not sufficiently support the desired home/lifestyle positioning.

Developer action

Adopt the previously supplied HAUSKU design palette as the global color system.

Core colors

Primary / Forest Green

#2F6B4F

Primary Hover / Deep Forest

#25543E

Secondary / Sage Green

#79A97F

Secondary Light / Soft Sage

#DDEBD9

Main Background

#FAFAF7

Section Background

#FFFFFF

Primary Text

#1F2933

Secondary Text

#4B5563

Standard Border

#E5E7EB

Hero gradient

Use:

#79A97F → #2F6B4F

rather than the current bright lime → saturated green combination.

Additional instruction

Implement these through global CSS variables/design tokens so the colors remain consistent across:

- header
- buttons
- product cards

- badges
- forms
- footer
- checkout
- account

alerts.

Bright lime/neon green should not be used as a dominant large-area background.

The honeycomb/background pattern should also be reduced in opacity and visual prominence so that it does not compete with content.

Priority: P1

25. Homepage counters / server rendering

Important values should not initially render as zero and then rely on JavaScript animation to display the actual value.

For example, the HTML should not initially expose:

- 0 rating
- 0 days
- 0 years

0%.

Developer action

Render the actual values directly in the HTML/server output.

Animation may subsequently enhance the presentation, but it must not be responsible for providing the actual information.

This is important for:

- accessibility
- search-engine rendering
- slow connections

JavaScript failure.

Priority: P1

26. About Us page

Developer action

Remove all development instructions/placeholders visible to customers.

For example:

"Team-Fotos können hier hinzugefügt werden, sobald der Kunde sie bereitstellt."

must not appear.

Remove duplicated mission/story text.

Replace "Made in Germany" with:

"Designed in Germany"

as appropriate.

The finished brand story should accurately communicate:

German product development/design + manufacture according to HAUSKU specifications by production partners in China.

Do not imply German physical manufacture.

Provide final team/company/brand content where required. [To follow]

Priority: P0/P1

27. Contact page

Current placeholder fields must be removed.

Roggenring 26, 23619 Hamberge, Schleswig-Holstein, Deutschland

support email; saleshub@niintellect.de

support/contact preferences.

Developer action

Implement the final information and remove all placeholders.

The contact form should include:

- name
- email
- optional order number
- topic

message.

Suggested topics:

Produktfrage

Bestellung

Versand

Rückgabe/Widerruf

Reklamation

Sonstiges

Priority: P0

28. Search

Search should be tested using at least:

- Laptop
- Laptopkissen
- Brotdose
- 850
- 1200
- Edelstahl
- Snackbox
- common spelling variations

no-result query.

The no-results state should provide a useful route back to products/categories.

Priority: P2

29. Accessibility

The developer must implement basic accessible ecommerce behaviour.

At minimum:

- complete keyboard navigation
- visible focus indicators
- correctly associated form labels
- meaningful validation messages
- image alt text
- semantic heading hierarchy
- sufficient text/background contrast
- no information communicated by colour alone
- accessible navigation/menu
- accessible cart and checkout

accessible cookie-consent controls.

Priority: P1

30. Security and operational controls

Developer – required confirmation

Please confirm implementation of:

- HTTPS throughout
- secure password hashing
- server-side input validation
- CSRF protection where applicable
- rate limiting/login protection
- secure payment-webhook validation
- no secrets/API credentials exposed client-side
- protected environment variables
- regular database backups
- documented restore procedure
- staging environment
- Git/source repository
- error logging
- dependency/security updates
- secure customer/admin sessions

2FA for administrator access if supported.

Ownership requirement

All production-critical accounts and assets must ultimately be owned or controlled by NI Intellect UG, including:

- hosting
- domain
- database
- source-code repository
- payment accounts
- analytics

email infrastructure.

The developer must not remain the sole owner of any production-critical resource.

Priority: P0/P1

31. Source-code handover

The original proposal stated source-code handover only as "if included in agreement."

That is not acceptable for the final project.

Developer requirement

NI Intellect UG must receive:

- complete application source code
- database schema
- Git repository access/ownership
- deployment configuration
- environment-variable documentation without exposing secrets insecurely
- setup/deployment instructions
- dependency list

backup/restore instructions.

Source-code handover is a mandatory project deliverable.

Priority: P0

32. Required implementation sequence

Please execute corrections in the following order:

Phase 1 – launch blockers

- legal pages
- company/contact placeholders
- remove Made in Germany
- GPSR
- remove unsupported guarantee/climate/recyclability claims
- review-source clarification
- privacy/tracking compliance
- checkout/payment integrity

source-code/production ownership.

Phase 2 – pre-launch quality

- shipping logic
- variants
- product specifications
- account
- invoices
- transactional emails
- German/English completeness
- SEO
- accessibility

color-system implementation.

Phase 3 – optimization after stable launch

- free-shipping progress indicator
- product bundles
- cross-selling
- advanced analytics
- Amazon FBA/MCF integration
- external 3PL integration

accounting automation.

33. Developer response requested

Waqar, please send this report to the developer and request a structured response against each P0/P1 item.

For each item the developer should state:

Completed

Not yet completed

Needs information from NI Intellect UG

Not currently implemented

Proposed implementation / expected completion

Where information is required from our side, please coordinate it before development continues.

In particular, we require the developer to answer the following open questions:

What is the exact source of the 47 reviews and 4.8 rating?

Why was a 60-day return/test period selected?

Which payment methods are already fully implemented and tested?

Is automated invoice generation implemented?

Which analytics/tracking technologies are currently installed?

Is a consent-management platform currently implemented?

How are database backups performed?

Is a staging environment available?

Where is the Git/source-code repository hosted and who owns it?

Are order/payment webhooks protected against duplicate processing?

Which transactional emails are already implemented?

Is the complete English checkout/account/email flow implemented?

Are sitemap, canonical, hreflang and Product schema already implemented?

Is administrator 2FA available?

Final acceptance position

The webshop has reached a useful first-development milestone, but it must not yet be treated as the final production version.

The immediate objective is not to add more visible features. It is to convert the existing prototype into a compliant, technically reliable and commercially credible HAUSKU webshop.

Production launch should occur only after all P0 items have been closed and the checkout/payment/order flow has passed end-to-end acceptance testing.

P1 items should also be substantially completed before normal customer traffic is directed to the webshop.
